(54) Title: END TOOL FOR TAPE MEASURE

(57) **Abstract:** The present invention provides a measuring device comprising a measuring tape, and a coupling hingedly mounted to the free end of the measuring tape, the coupling comprising a first section and a second section, wherein the first section and the second section are substantially perpendicular to one another, the coupling being moveable between a first state in which the first section is disposed substantially parallel to a longitudinal axis of the measuring tape, and a second state in which the second section is disposed substantially parallel to the longitudinal axis of the measuring tape.
